

Malek Ahmad | majobs112002@gmail.com | 0549498961 | [Linkedin](#) | [Github](#)

- **Backend Software Engineer** specializing in **Python** and **JavaScript**, with experience designing and building **scalable, maintainable server-side systems**.
- Strong proficiency in **Python**, with experience in backend development, performance-oriented programming, and building **scalable backend services**. Skilled in **API development, database design, and backend architecture**, with a solid foundation in systems programming.
- **Highly motivated and fast learner**, collaborative team player with strong problem-solving skills, driven to design and build **reliable, efficient, and scalable backend systems**.

Education

2021 –2025: Azrieli College of engineering | Software engineering | GPA 90.83

Experience

- **2025: Place-IL Developers Internship Program**
 - Successfully passed a **competitive** selection process (**250+ candidates**), including **coding challenges** in **OOP, data structures, and databases**.
 - Successfully completed **HR, technical, and group** interview stages.
- **2024: CS50: Introduction to Artificial Intelligence with Python – Harvard University (edX)**
 - Developed practical projects such as **image classification, sentiment analysis, Sudoku solver, and reinforcement learning agents**.
 - Gained hands-on experience in **AI concepts**, including search algorithms, knowledge representation, optimization, and machine learning.
 - Certificate and projects available on [GitHub](#).

Projects

- **2025: Retrieval-Augmented Generation (RAG) System for Multilingual Document Search, [Code link](#)**
Built a **scalable RAG web application** for internal use in academic institutions, enabling accurate Q&A over large, interconnected document collections in **Hebrew, Arabic, and English**.
Developed the **backend using Python (Flask), LangChain, and FAISS**. Designed a **React-based frontend** with a chat interface and file upload system.
- **2025: Reinforcement Learning AI for SOS Game, [Code link](#)**
Developed a self-learning AI agent for the SOS game **using Monte Carlo Tree Search (MCTS), Puct and deep learning**. Built **using Python, TensorFlow/Keras**.
- **2024: Trainers' app for the Jerusalem Chess Center, [Code link](#)**
Developed a **React Native app connected to a Firestore database** for managing teachers, student groups, schools, and lessons. Developed **all the backend part**.
- **2024: Project Management Web App, [Code link](#)**
Created a **server–client system in JavaScript with full CRUD operations** for projects, team members, and images from **the Unsplash API**. The data is stored in a **JSON file** acting as **the local database** in the server.

Volunteering

2022 – 2025: Tutor | Azrieli College of Engineering | Jerusalem

Tutored **4-5 students per year** in **programming, algorithms, math** and **physics** courses, improving my responsibility, self-confidence, and socialization skills.

2022: Chess Club Mentor | Jerusalem

Taught children chess basics and organized a school chess competition. Developed the ability to work with different age groups.

Skills

Programming languages: C, C++, Java, Python, JavaScript.

Operating Systems: Linux, Windows.

Frameworks & Runtime: Node.js, Express.js, NestJS, Flask.

Concepts: Server-side development, RESTful APIs, authentication & authorization, scalable backend architecture

Database: SQL (MySQL), SQLite, FireStore, MongoDB.

IDEs: Eclipse, CLion, PyCharm, VS Code.

Languages: Arabic (Native), Hebrew (Fluent), English (High level)
