

Malek Ahmad | majobs112002@gmail.com | 0549498961 | [Linkedin](#) | [Github](#)

- **Software Engineering graduate (BSc) with a GPA of 90.83**, specializing in C\C++ and Python and focused on backend.
- Strong proficiency in **C++ and Python**, with hands-on experience in **backend development**, system-level programming, and building **scalable server-side applications**. Experienced with **APIs, databases, and full-stack systems**, with a strong foundation in **performance optimization** and **clean backend architecture**.
- **Strong problem solver** and **collaborative team player**, with **practical experience** designing and implementing **backend components**, **taking ownership of features**, and **working under pressure**. **Highly motivated self-learner** with a **strong interest in high-performance systems, AI, and machine learning**.

Education

2021 –2025: Azrieli College of engineering | Software engineering | GPA 90.83

Experience

- **2025: Place-IL Developers Internship Program**
 - Successfully passed a **competitive** selection process (**250+ candidates**), including **coding challenges** in **OOP, data structures, and databases**.
 - Successfully completed **HR, technical, and group** interview stages.
- **2024: CS50: Introduction to Artificial Intelligence with Python – Harvard University (edX)**
 - Developed practical projects such as **image classification, sentiment analysis, Sudoku solver, and reinforcement learning agents**.
 - Gained hands-on experience in **AI concepts**, including search algorithms, knowledge representation, optimization, and machine learning.
 - Certificate and projects available on [GitHub](#).

Projects

- **2025: Retrieval-Augmented Generation (RAG) System for Multilingual Document Search, [Code link](#)**
Built a scalable **RAG web application** for internal use in academic institutions, enabling accurate Q&A over large, interconnected document collections in **Hebrew, Arabic, and English**.
Developed the **backend using Python (Flask), LangChain, and FAISS**. Designed a **React-based frontend** with a chat interface and file upload system.
- **2025: Reinforcement Learning AI for SOS Game, [Code link](#)**
Developed a self-learning AI agent for the SOS game using **Monte Carlo Tree Search (MCTS)**, Puct and deep learning. Built using **Python, TensorFlow/Keras**.
- **2024: Trainers' app for the Jerusalem Chess Center, [Code link](#)**
Developed a **React Native app** connected to a **Firestore database** for managing teachers, student groups, schools, and lessons. Developed **all the backend part**.
- **2024: Hard-Disk Job Simulation, [Code link](#)**
Developed a **C++ project, simulating hard-disk scheduling and job handling processes**. The project focused on optimizing task management and resource allocation in a simulated operating system environment.

Volunteering

2022 – 2025: Tutor | Azrieli College of Engineering | Jerusalem

Tutored **4-5 students per year** in **programming, algorithms, math** and **physics** courses, improving my responsibility, self-confidence, and socialization skills.

2022: Chess Club Mentor | Jerusalem

Taught children chess basics and organized a school chess competition. Developed the ability to work with different age groups.

Skills

Programming languages: C, C++, Java, Python, JavaScript.

Operating Systems: Linux, Windows.

Frameworks/Tools: React Native, React, Node.js, EXPO.

Database: SQL (MySQL), SQLite, FireStore, MongoDB.

IDEs: Eclipse, CLion, PyCharm, VS Code.

Languages: Arabic (Native), Hebrew (Fluent), English (High level)
