

Malek Ahmad | majobs112002@gmail.com | +972549498961 | [Linkedin](#) | [Github](#) | [Portfolio](#)

Software Engineer specializing in **Python** and **JavaScript**, with hands-on experience **designing and building scalable, maintainable systems**. Strong proficiency in **Python**, **backend architecture**, **API development**, and **database design**, with a solid foundation in **performance-oriented** and **systems programming**. Highly **motivated and fast learner**, collaborative **team player** with **strong problem-solving skills**, driven to build reliable, efficient, and scalable backend solutions.

Skills

Programming languages: C, C++, Python, JavaScript.

Operating Systems: Linux, Windows.

Frameworks & Runtime: Node.js, Express.js, NestJS, Flask, FastAPI.

Developer Tools: Git, REST APIs, Copilot.

Frontend Development: React, React Native

Concepts: Server-side development, RESTful APIs, authentication & authorization, scalable backend architecture.

AI Concepts: Retrieval-Augmented Generation (RAG), LLM Integration, PageIndex.

AI & LLM Tools: GPT (OpenAI), Gemini, Hugging Face, LangChain, Lovable.

Database: SQL (MySQL), SQLite, Firestore, MongoDB.

IDEs: CLion, PyCharm, VS Code, Cursor.

Education

2021 –2025: Azrieli College of engineering | Software engineering | GPA 90.83

Courses: Distributed Systems | Introduction to Software Engineering | Software Engineering in the Service of the Community | Data Structures and Algorithms | Operating Systems | Computer Networks | Databases

Projects

- **2026: AI Codebase Assistant**, [Code link](#)

Built an **AI-powered codebase assistant** for analyzing GitHub repositories and answering repository-specific questions using natural language.

Developed a full-stack solution using **Python (FastAPI)**, **React**, **OpenAI**, and **PageIndex**, implementing **tree-based retrieval**, alongside **PDF export**, and **Google Drive integration**.

- **2025: Retrieval-Augmented Generation (RAG) System for Multilingual Document Search**, [Code link](#)

Built a scalable **RAG web application** for internal use in academic institutions, enabling accurate Q&A over large, interconnected document collections in **Hebrew, Arabic, and English**.

Developed the **backend using Python (Flask)**, **LangChain**, and **FAISS**. Designed a **React-based frontend** with a chat interface and file upload system.

- **2025: AI Driving Test Preparation Tool**, [Demo \(LinkedIn\)](#)

Built an interactive AI-based learning system using **JavaScript**, with dynamic test flows and real-time feedback. Focused on structuring AI responses to improve accuracy and usability.

- **2024: Trainers' app for the Jerusalem Chess Center**, [Code link](#)

Developed a **React Native app** as part of a **4-person team**, connecting to a **Firestore database** to manage teachers, student groups, schools, and lessons.

Implemented backend logic for **CRUD operations**, **data synchronization**, and **real-time updates**.

Collaborated on **feature planning**, **architecture**, and **testing** to ensure reliable and scalable functionality.

Certificates

- **2026: AI Growth Lab Program — Place-IL**, [Certificate link](#)

- Completed a **competitive generative AI program** focused on **modern LLM applications**, **full-stack AI development**, and **hands-on implementation of real-world AI products**.

- **2025: Place-IL Developers Internship Program**

- Successfully passed a **competitive** selection process (**250+ candidates**), including **coding challenges** in **OOP**, **data structures**, and **databases**.
- Successfully completed **HR**, **technical**, and **group** interview stages.

Experience

2022 – 2025: Tutor | Azrieli College of Engineering | Jerusalem

Tutored **4-5 students per year** in **programming**, **algorithms**, **math** and **physics** courses, improving my responsibility, self-confidence, and socialization skills.

Languages: Arabic (Native), Hebrew (Fluent), English (High level).
